Changes in Accounting Policies

Except for the following standard that has been newly applied, the accounting policies adopted in the consolidated financial statements for the fiscal year ended March 31, 2023, are applied consistently in the preparation of these consolidated financial statements.

Statement of standards	Summary of new standards and amendments
IFRS 17 Insurance Contracts	Revision to the definition and accounting treatment of insurance contracts

The Group had applied IFRS 4 "Insurance Contracts" until the fiscal year ended March 31, 2023. However, it has applied IFRS 17 "Insurance Contracts" ("IFRS 17") from the first quarter of the fiscal year ending March 31, 2024.

The date of transition to IFRS 17 was April 1, 2022 (the "date of transition"). The Group recognized the cumulative effect of applying this standard at the date of transition and retrospectively applied the standard to the consolidated financial statements for the previous period in accordance with the transitional treatment.

The Group does not present the quantitative information required by paragraph 28 (f) of IAS 8 in accordance with paragraph C3 (a) of IFRS 17. The impact of the application of IFRS 17 on retained earnings at the date of transition is presented in the condensed interim consolidated statement of changes in equity as the cumulative effect of changes in accounting policies. In transitioning to IFRS 17, the Group applied the fair value approach to life insurance contracts, except for certain contracts, because it is impracticable for the Group to apply the fully retrospective approach due to a limitation in obtaining the necessary information, resulting from system development or other reasons. The Group applied the fully retrospective approach to other insurance contracts.

(Fully retrospective approach)

The Group recognized and measured each group of insurance contracts and group of reinsurance contracts at the date of transition as if IFRS 17 had always been applied, and recognized any resulting net difference in equity.

(Fair value approach)

For insurance contracts to which it is impracticable to apply the fully retrospective approach, the Group determines the contractual service margin ("CSM") or a loss component of the liability for remaining coverage at the date of transition as the difference between the fair value of a group of insurance contracts at that date and the fulfilment cash flows measured at that date.

The Group determines all contracts that are measured by applying the fair value approach using reasonable and supportable information available at the transition date.

Some of the groups of insurance contracts that are measured by applying the fair value approach include contracts issued more than one year apart. The Group determines the discount rates at the date of initial recognition of such groups at the date of transition instead of at the date of initial recognition.

For all contracts that are measured by applying the fair value approach, the Group determines the cumulative amount of insurance finance income or expenses recognized in other comprehensive income at the date of transition as nil.

The Group classifies contracts in which it takes on significant insurance risk as insurance contracts, and contracts that transfer significant insurance risk related to underlying insurance contracts as reinsurance contracts.

(a) Aggregation

For the purpose of measurement, insurance contracts are aggregated into groups. The Group determines a group of insurance contracts by identifying portfolios of insurance contracts. Each portfolio of insurance contracts comprises contracts subject to similar risks and managed together, and each portfolio is divided into annual cohorts. The annual cohorts include contracts issued within twelve months, and they are divided into three groups based on contract profitability levels:

- a group of contracts that are onerous at initial recognition;
- a group of contracts that at initial recognition have no significant possibility of becoming onerous subsequently; and
- a group of the remaining contracts in the portfolio.

(b) Initial recognition

Insurance contracts

The Group recognizes a group of insurance contracts it issued from the earliest of the following:

- the beginning of the coverage period of the group of contracts;
- the date when the first payment from a policyholder in the group becomes due; and
- for a group of onerous contracts, when the group becomes onerous.

(c) Measurement

The Group includes in the measurement of a group of insurance contracts all the future cash flows within the boundary of each contract in the Group. Cash flows are within the boundary of an insurance contract if they arise from substantive rights and obligations that exist during the reporting period in which the Group can compel the policyholder to pay the premiums or in which the Group has a substantive obligation to provide the policyholder with insurance contract services.

(i) Insurance contracts — Contracts to which the premium allocation approach (“PAA”) is not applied (Initial measurement)

On initial recognition, the Group measures a group of insurance contracts at the total of:

(a) Fulfilment cash flows

The fulfilment cash flows comprise estimates of future cash flows, an adjustment to reflect the time value of money and the financial risks related to the future cash flows, and a risk adjustment for non-financial risk (the consideration that the Group requires for bearing the uncertainty about the amount and timing of the cash flows that arises from non-financial risk).

(b) CSM

The CSM of a group of insurance contracts represents the unearned profit the Group will recognize as it provides services under the contracts.

The Group recognizes an onerous insurance contract on initial recognition if any cash flows arising from the contract at the date of initial recognition in total are a net outflow. In recognizing onerous contracts, the Group recognizes a loss in profit or loss for the net outflow described above and identifies the same amount as a loss component of the liability for remaining coverage.

(Subsequent measurement)

The carrying amount of a group of insurance contracts at the end of each reporting period is the sum of the liability for remaining coverage and the liability for incurred claims. The liability for remaining coverage comprises (a) the fulfilment cash flows related to services to be provided under the contracts in future periods, and (b) the remaining CSM at the reporting date. The liability for incurred claims includes the fulfillment cash flows relating to unpaid incurred claims and expenses, including claims that have been incurred but not yet reported.

The loss component is measured by allocating the subsequent changes in fulfillment cash flows on a systematic basis.

(ii) Insurance contracts — Contracts to which the PAA is applied

For insurance contracts with a coverage period of no more than one year at initial recognition, and certain insurance contracts that would not differ materially in the measurement of liability for remaining coverage from the one that would be produced when measured without applying the PAA, the Group applies the PAA for measuring a group of insurance contracts.

(Initial measurement)

The carrying amount of the liability for remaining coverage at initial recognition of each group of insurance contracts is measured at the premiums received at initial recognition less any insurance acquisition cash flows (cash flows arising from the activities of selling, underwriting and starting the group of insurance contracts that are directly attributable to the portfolio of insurance contracts to which the group belongs) allocated to the group of insurance contracts at that date.

(Subsequent measurement)

The carrying amount of the liability for remaining coverage increases through the amortization of insurance acquisition cash flows recognized as premiums received and expenses. It decreases through the recognition of insurance revenue related to services provided and the allocation of additional insurance acquisition cash flows after initial recognition.

If, at any time during the coverage period, facts and circumstances indicate that a group of insurance contracts is onerous, the Group recognizes a loss in profit or loss and increases the liability for remaining coverage to the extent that current estimates of the fulfilment cash flows related to remaining coverage exceed the carrying amount of the liability for remaining coverage.

The Group recognizes the liability for incurred claims for the group of insurance contracts at the fulfilment cash flows relating to incurred claims.

(d) Income and expenses

(i) Insurance revenue

Excluding any investment component, which represents the amount required to be repaid to the policyholder in all circumstances, regardless of whether an insured event occurs, insurance revenue is measured as follows:

(Contracts to which the PAA is not applied)

The Group recognizes insurance revenue as it provides services based on a group of insurance contracts. Insurance revenue represents the total of the changes in the liability for remaining coverage that relates to services for which the Group expects to receive consideration.

(Contracts to which the PAA is applied)

Insurance revenue is the amount of expected premium receipts. In principle, the Group allocates and recognizes the portion of the premiums in each reporting period on the basis of the passage of time.

(ii) Insurance service expenses

Insurance service expenses arising from insurance contracts are recognized in profit or loss when incurred. Excluding repayments of investment components, these expenses comprise:

- Incurred claims and other insurance service expenses;
- Amortization of insurance acquisition cash flows;
- Losses on onerous contracts and reversals of such losses; and
- Adjustment of the liability for incurred claims.

(iii) Insurance finance income or expenses

Insurance finance income or expenses comprise the change in the carrying amount of the group of insurance contracts arising from the effect of the time value of money, financial risk and changes in the time value of money and financial risk. The Group has chosen to disaggregate insurance finance income or expenses between profit or loss and other comprehensive income except for

certain insurance contracts. The effect of changes in financial variables, such as discount rates, is presented as fluctuations in discount rates of insurance contracts in the interim condensed consolidated statement of comprehensive income.
